Summary

As a junior data analyst at NSWIT SUPPORT, I work with a team of experienced data professionals to provide data analysis and business intelligence services to clients across various industries. I use statistical analysis, Microsoft Power Query, and big data tools to collect, process, and visualize data, and generate actionable insights and recommendations.

I have a strong foundation in data analysis and a passion for driving data-driven solutions, thanks to my master of computer science (machine learning and big data) degree from the University of Wollongong. I have also completed multiple certifications in data analytics from LinkedIn, which have enhanced my skills and knowledge in this field. I am seeking a challenging role where I can apply my analytical skills and work collaboratively with cross-functional teams to deliver data-driven solutions.
